

Thermally Enhanced Material Processing at Elevated Rates

Web Developer/IT Intern

Job Type:

Internship

Job Summary:

The position is for a summer internship. The goal of the work is to design, develop, and document an attractive website and a secure FTP site. Additional tasks include updating and modifying the existing computer network and the design and component specification of high powered computer to process engineering simulations and 3-D modeling. The perfect candidate would have knowledge in both of these areas, however, experience in one area and a willingness to learn the other is also excellent.

Requirements:

- Superb digital and written communication skills.
- Willingness and mental discipline required for independent learning.
- Ability to write work instructions with thorough documentation.
- Knowledge in website development OR computer and network systems.
- Good work ethic with the capacity to work without the need for direct supervision.

About us:

Temper Inc. is a small business that specializes in process research and development. The engineering office is located in Rockford, MI with the lab and testing space in Madison Heights, MI. Temper's programs focus on developing new and unique technologies for manufacturing.
